CURRICULUM VITAE

Creative Technologist | Real-Time 3D on the Web

CONTACT

Full Name	Radwan Jameel
Email	jameelradwan4@gmail.com
LinkedIn	linkedin.com/in/radwanjml

PROFESSIONAL PROFILE

Creative technologist with an engineering background, specialising in interactive 3D experiences in the browser. Builds with Three.js, WebGL, custom GLSL shaders and WebRTC, and models in Blender. Focused on lean production budgets: every project runs without plugins, uses procedural graphics instead of image files, and holds 60 frames per second on mid-range phones. Works with agentic AI workflows (Claude Code) where architecture, constraints and review stay with me. Seeking a role as Creative Developer, Frontend Developer or Technical Artist in Germany.

PROFESSIONAL EXPERIENCE

06/2026 to present — **Founder and Creative Technologist**
Tibr Studio, Hyderabad, remote

- Interactive 3D websites in Three.js, WebGL and custom GLSL shaders for dental and aesthetic clinics and education clients
- Eight live builds shipped, including a 12-page education platform and three clinic sites
- Blender modelling and asset optimisation for real-time web delivery
- Scroll-linked motion with GSAP and Lenis, tested at 60 frames per second on mid-range mobile
- Work with a technical partner; architect and direct builds using Claude Code

06/2025 to present — **Founder and Environment Designer, Closer**
Independent project, remote

- Browser experience for couples in long-distance relationships, with real-time 3D scenes in Three.js and custom GLSL shaders
- Environment and asset modelling in Blender, motion design with GSAP and Lenis

10/2025 to 04/2026 — **Technical support for enterprise clients**
ADP, Hyderabad

09/2024 to 06/2025 — **Technical support for enterprise clients**
Tech Mahindra, client Verizon (USA), Hyderabad

05/2023 to 03/2024 — **Technical support for consumer devices and services**
Amazon, Hyderabad

SELECTED PROJECTS

07/2026 to present — **Closer, real-time 3D experience for two players**
Three.js, WebGL, GLSL, Blender

- Ten-layer seaside scene with custom water shaders, terrain height synchronisation and distance-attenuated audio at 60 FPS
- Replaced skeletal animation with wheeled and hover kinematics after mobile performance problems

- Deterministic contact math for character meetings without clipping or collision physics
- Session architecture without a host machine: late joiners reconstruct the timeline from server time offsets

09/2026 **Untitled Chain Game, 3D network strategy game**
Three.js, GLSL, WebRTC, PeerJS
- Serverless multiplayer game in a single bundle of about 1.05 MB, peers connected through WebRTC data channels
- Custom graph generator supporting Barabasi-Albert, Watts-Strogatz and Euclidean proximity networks
- Deterministic cascade logic: peers exchange only single node IDs and stay in lockstep

09/2026 **SERAI, procedural 3D architectural visualisation**
Three.js, Canvas 2D
- Interactive construction phase reveal using a single clipping plane and monotone cubic interpolation
- Procedural textures instead of image files, about 251 KB gzipped, above 45 FPS on integrated graphics

09/2026 **Yoake, procedural scroll stage**
Three.js, Lenis, GLSL
- Scroll and 3D camera synchronised in one shared render loop, live secondary cameras in cards via scissor test
- Custom post-processing with bloom, light shafts and ACES tone mapping, about 274 KB gzipped versus 2.2 MB of image files

08/2026 **AGIT (unsolicited concept) and PULSE, education platform and network visualisation**
WebGL, GLSL, Python
- Platform at roughly 150 KB per page versus nearly 15 MB on the original site, WCAG AA accessibility
- GPU point shaders, Verlet physics and procedural space backdrop at 60 FPS on desktop and mobile

EDUCATION

10/2021 to 06/2024 **Bachelor of Technology (B.Tech), Electronics and Communication Engineering**
Lords Institute of Engineering and Technology, Hyderabad (Osmania University)

06/2017 to 07/2021 **Diploma, Special Communication Engineering**
Government Institute of Electronics, Secunderabad, grade 72 percent

SKILLS

3D and graphics	Three.js, WebGL, GLSL shaders, Canvas 2D, post-processing, Blender, mobile optimisation
Networking	WebRTC, PeerJS, deterministic synchronisation, session architecture
Frontend	JavaScript, GSAP, Lenis, HTML, CSS, accessibility (WCAG AA), Python basics
Working method	Agentic development with Claude Code, performance budgets, prototyping, Unreal Engine basics

LANGUAGES

English	Fluent, working language in all previous roles
German	B1, Goethe-Institut examination parts Speaking and Writing, Reading and Listening in preparation
Hindi, Urdu	Fluent
Telugu, Arabic	Basic
