Radwan Jameel

Creative Technologist | Real-time 3D for the web (Three.js, WebGL, Blender)
Hyderabad, India (open to remote work; relocating to Germany from March 2027) | jameelradwan4@gmail.com | radwanjml.github.io | linkedin.com/in/radwanjml | github.com/radwanjml

PROFILE

Creative technologist with a BE in Electronics and Communication Engineering. I model and render in Blender (3.5 years) and build interactive 3D for the browser in Three.js, WebGL and GLSL. The browser code is written with AI coding tools (Claude Code); I design the architecture and constraints, direct the AI, review the output and test on real devices. Work is lean by design: procedural graphics and strict page-weight budgets (YOAKE about 274 KB gzipped in total). Nearly three years of enterprise technical support taught me to debug calmly and explain clearly. Seeking Creative Developer, Frontend Developer, Technical Artist or 3D Web roles; open to remote work now.

SKILLS

- **3D and graphics:** Blender (modelling, Cycles rendering, geometry nodes), Three.js, WebGL, GLSL shaders (AI-assisted), post-processing, glTF/GLB with meshopt compression, Unreal Engine basics
- **Frontend:** JavaScript, HTML, CSS, GSAP, Lenis, accessibility (WCAG AA, Lighthouse), performance budgets, GitHub Pages, Netlify
- **Networking:** WebSockets, WebRTC, PeerJS, Node.js relay server, deterministic synchronisation
- **Tools and method:** Claude Code (agentic development), Git, Figma, Affinity, rapid prototyping, Python basics, Salesforce, Zendesk

PROJECTS

Portfolio, radwanjml.github.io | Three.js, Blender Cycles, WebGL | 10/2026
- Walkable island hero: a character walks a Cycles-rendered plate, with its height read from the render's own depth map, in three times of day.
- In-browser 3D model viewer with solid, wireframe and rendered shading; Lighthouse accessibility, SEO and best-practice scores of 100 on its case-study, About and Models pages.

Closer, two-player 3D cove in the browser, closer-cove.netlify.app | Three.js, GLSL, WebSockets, Node.js, Blender | 06/2025 - present
- Characters modelled in Blender and rigged in code: wheeled and hover kinematics driven by velocity and acceleration, no bones.
- Ten-layer seaside scene with water shaders and terrain height sync; hug pose solved from measured geometry.
- Session architecture without a host machine: Node.js WebSocket relay on Render; late joiners rebuild the timeline from server time offsets.

Overspill, 3D network strategy game, overspill-game.netlify.app | Three.js, GLSL, WebRTC, PeerJS | 09/2026
- 2-4 players on one device or 2 online with a room code; serverless peer-to-peer multiplayer in a single bundle of about 1.05 MB.
- Graph generator for Barabasi-Albert, Watts-Strogatz and proximity networks; deterministic cascades keep peers in lockstep.

AGIT V5, twelve-page website concept for a Perth education provider (unsolicited), agit-tibr.netlify.app | HTML/CSS, GSAP, Lenis, WebGL | 08/2026
- One design system across twelve pages with a 301 redirect map so existing links and search ranking survive.
- About 150 KB per page versus nearly 15 MB on the original site; hero art compressed from 17 MB to 169 KB; WCAG AA.

Dental clinic concept sites: Obsidian, Aurelle, Velora, Nur, Pearl | HTML/CSS, GSAP, Lenis | 06 - 09/2026
- Five concept brands designed and built end to end; all live and linked from the portfolio.

WebGL studies: SERAI, YOAKE, PULSE | Three.js, GLSL, Canvas 2D | 08 - 09/2026
- SERAI: 22-storey tower assembling through a single clipping plane; about 251 KB gzipped. YOAKE: scroll and camera in one render loop, custom bloom and light shafts; about 274 KB gzipped. PULSE: network visualisation with GPU point shaders and Verlet physics.

3D modelling and rendering | Blender, Cycles | 2023 - present
- Product and prop visualisation, hard-surface models and animated renders (34 in the portfolio); export pipeline to compressed GLB for the web.

EXPERIENCE

Founder and Creative Technologist, Tibr Studio | Hyderabad, remote | 06/2026 - present
- Interactive 3D websites in Three.js, WebGL and GLSL (AI-assisted): concept and pitch builds for clinics and an education provider, plus technique studies.
- Blender modelling and asset optimisation for real-time web delivery; scroll-linked motion in GSAP and Lenis.

Client Consultant (part-time), ADP, Wisely PayCard Client Services | Hyderabad | 10/2025 - 04/2026
- Client onboarding, activation and account operations; guided clients through KYC and UBO compliance workflows in a regulated environment.

Technical Support Specialist, Tech Mahindra (client Verizon, USA) | Hyderabad | 09/2024 - 06/2025

- Device, connectivity, outage and billing support on backend systems; handled escalations; ranked among top performers on QA, CSAT and AHT; informally onboarded new joiners.

Technical Support Associate, Amazon | Hyderabad, remote | 05/2023 - 03/2024

- Alexa, Fire TV, Prime Video and retail support for US, UK and Indian customers, 30-40 interactions a day; German-language chat support in the final month.

Customer Service Representative, Sykes (client Just Eat, UK) | Hyderabad | 01/2022 - 06/2022

- Order, billing and account support by email, chat and phone.

EDUCATION

Bachelor of Engineering (BE), Electronics and Communication Engineering, Lords Institute of Engineering and Technology (Osmania University), Hyderabad, 2021 - 2024. Projects: IoT pantry information system, PLC and SCADA ventilation monitoring, sensor-driven water-efficient dishwasher.

Diploma, Electronics and Communication Engineering, Government Institute of Electronics, Secunderabad, 2017 - 2021 (72%)

LANGUAGES

English: fluent (IELTS Academic 7.5 overall, C1, 2026). German: B1, Goethe-Institut (Speaking and Writing passed; Reading and Listening in preparation). Hindi, Urdu: fluent. Telugu, Arabic: basic.
